

ABSTRACT

A main absorbent article body part (16) comprises a liquid permeable surface side sheet (12), a liquid impermeable back face side sheet (13), and an absorbent body (14), positioned between the sheets (12), (13), and having flap parts (15), extending outward to the respective sides of the absorbent body (14), and is formed by layering an outer layer sheet (17) onto the back face side of the main absorbent article body part (16). At the outer layer sheet (17), first leg part elastic bodies (29) and second leg part elastic bodies (30) are positioned with sides at one end being set along leg parts (23) from parts of a dorsal waist part (20) at one side and the other side, intermediate parts crossing a crotch part (21) obliquely, and the sides at the other end being set along the leg parts (23) at parts of a ventral waist part (22) at the other side and the one side. Third leg part elastic bodies (24) are positioned along the longitudinal direction at the flap parts (15).
